

Engineering  
simplicity  
into kitchen  
ventilation  
systems.

---

## One simple promise.

At Accurex<sup>®</sup>, everything we do—from engineering to aftermarket service—is designed to make it easy for you to succeed.

## One simple purpose.

Not only do we work to clear the air in kitchens, we work to clear away hassles and confusion. To get everything that's in the way, out of the way. In a word, we simplify. It requires every bit of our engineering prowess. Every ounce of our knowledge and expertise. Every shred of our integrity. It's this pursuit of simplicity that provides a more ideal environment for creating meals that enrich lives.

## One simple goal.

We aim to make people comfortable. When Accurex designs your project, diners won't be distracted by uncomfortable temperatures, poor indoor air quality, or ventilation noise. You and your staff will breathe easier knowing you're surrounded by effective ventilation and certified products. The focus stays on the service, the atmosphere and, most importantly, the meal.

## Can a kitchen ventilation system manufacturer make your life easier?

We like to think so. That's why we're committed to accountability and simplicity. Every day. In each product we engineer.

## Clarity at every stage.

It takes work to create an effective and efficient commercial kitchen ventilation system. At Accurex, we do the hard work for you. We apply our vast expertise to simplify and clarify even the most complex issues. We offer a breadth of products and services that can be configured to meet your exact standards. We focus on creating a building that breathes and functions the way you expect. That means you can focus on delighting customers.

## Single, simplified source.

We are a Greenheck Group Company, the world's leading manufacturer of commercial air movement and control equipment. You can rest easy knowing you're sourcing a complete kitchen ventilation system from one trusted provider. What's more, you'll find representatives, engineers and product specialists standing by to help—from design to aftermarket support. And what could be simpler than that?

## A partner who takes the hassle out of kitchen ventilation.

The Accurex team is here to make it easier to solve the most complex kitchen ventilation challenges. We complement our design and consultation services with complete field and technical support. We listen to your expectations. We deliver on our promises. We work to make every building experience positive, every step of the way.

## Engineered to move air and remove complexity.

We engineer commercial ventilation systems that work, and we build them to last. It's that simple.

### An exacting promise.

Whether you require an exhaust hood, fans, fire suppression, make-up air, pollution controls or efficient energy management, our breadth of product styles, sizes, features and accessories gives you the flexibility to meet your functional and aesthetic requirements. Each is engineered to have higher efficiencies and lower operating cost. And everything we build can be fully integrated throughout your space—no matter how big, how small or how complex. Now that's worry-free simplicity, day in and day out.

### Staying true to our focus.

We offer a straightforward promise of responsiveness, accountability and integrity. Our products are engineered and manufactured with the highest quality standards so you can count on them to work for years to come. In fact, each Accurex product is backed by our aftermarket service, so if issues arise, we're standing by to make it right. After all, we believe engineering a kitchen ventilation system takes more than precision and craftsmanship—it takes a commitment to you.

## Investing and improving.

We go beyond creating products that make your life easier. With investments in technology and operations, we continually work to bring you exceptional quality. To ensure safe and reliable performance, our products are also comprehensively tested for structural integrity, aerodynamic performance, sound levels, mechanical operation, vibration, temperatures, environmental impact and more. Contact your local Account Manager to learn more about designing your next project. And for a unique, hands-on learning experience, ask about visiting our education center, manufacturing and testing facilities.
